

Product Information

Cellophane (Flake)

GENERAL DESCRIPTION

Cellophane (Flake) is used to provide a sealing supplement to other lost circulation material in water based drilling muds.

FEATURES AND BENEFITS

Cellophane is a basic additive in cement slurries, providing a matting effect in the control of losses. It also provides a sealing agent supplement to other loss circulation material in water based drilling muds.

RECOMMENDED TREATMENT

Cellophane is normally mixed with other LCM material such as Sawdust, Premium Seal, or Kwik Seal.

Concentrations will vary on the degree of losses. Mix into a viscous mud with agitation.

Cellophane will not pass through the shale shaker screens; therefore, the shaker will have to be by-passed. The average size of Cellophane is 9.5mm (3/8")

TYPICAL PHYSICAL PROPERTIES

Appearance	Clear Flakes
Specific Gravity	1.0

HANDLING

Cellophane (Flake) is not a controlled product using the WHMIS classification.

Refer to MSDS information for specific precautions and handling.

AVAILABILITY

Cellophane (Flake) is packaged in 11.34kg bags and is available from HiTech Fluid Systems Ltd.
