To whom it may Concern:

Re: Customer Reference - HiTech Fluid Systems

Encana Corporation has utilized fluid systems and associated services from HiTech Fluid Systems since January 2005.

Employing the two (2) phased oil based fluid from HiTech Fluid Systems to drill our deep foothills wells, has realized significant cost reductions. Savings are continually recognized from mud programs that utilize less material, reduced rig time through faster ROP, and cleanup costs associated with cuttings that are drier and less expensive to haul.

The team at HiTech Fluid Systems has proven to be a valuable partner at Encana. They are experts in their field, professional and very easy to work with. Their knowledge of drilling, workover and completions is evident by the success and the complexity of the work required. Additionally, the invoices we receive are generally at or below their estimated fluid cost, demonstrating the high quality mud engineers employed.

Based on our experience, any company concerned with protecting assets, increasing the probability of positive production, and dealing with partners who provide value, should be working with HiTech Fluid Systems.

If you would like additional information about HiTech Fluid Systems, you can contact me at 403.645.2403 or mike.lahure@encana.com.

Sincerely,
