

MEG Energy Corp.

June 29, 2010

To Whom It May Concern:

I would like to take this time to acknowledge and show my appreciation for the work completed by your firm over the past drilling season.

During the recent MEG Energy program at Christina Lake, HiTech Fluid Systems played an intricate part in our success. We would like to take this time to thank you and commend the entire HiTech team for their involvement. Some of the things that MEG noticed are as follows:

- Reduced mud cost an average of \$1,800 per well.
- Dryer cuttings making them easier to handle and dispose. This in turn reduced our mixing ratio from 3:1 down to 1:1 therefore conveying a substantial savings in trucking and disposal costs.
- The bid price was more precise to actual costs than the other mud company was.
- HiTech technical people were very professional, willing to assist and helped to educate. They efficiently handled any and all hole problems by resolving the issues in a inexpensive manner yet still delivered us gauge hole every time, allowing us to get our logs to bottom consistently.
- Trucking costs were considerably lower than your competitors were and vans were always clean and product accounted for.
- Field staff was involved in proactive solutions throughout the project from safety to operations; they worked well with all team members ranging from drilling crews to site consultants.
- Office support to field was excellent; communication among all parties was excellent.

Once again thank you for all your hard work and congratulations.

Sincerely

Jason Sawyer
